Polaroid Lab

Before you get started.

Quick Start Guide

I
Charge the Polaroid Lab before use

II
The Polaroid Lab only works with the Polaroid app. Download it from the App Store or Google Play Store
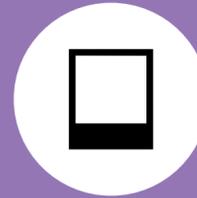

III
The Polaroid Lab is compatible with Polaroid i-Type and Polaroid 600 type film
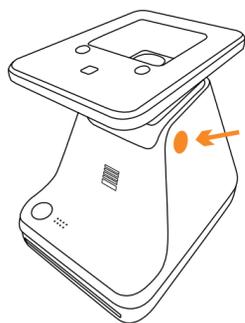

IV
For best results, remove the screen protector and cover from your smartphone. Check that your phone's screen is clean. Cracks and scratches on your screen will influence picture quality
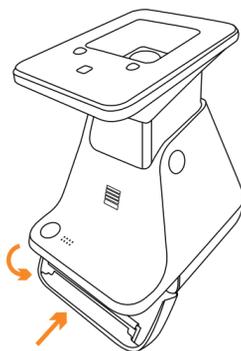

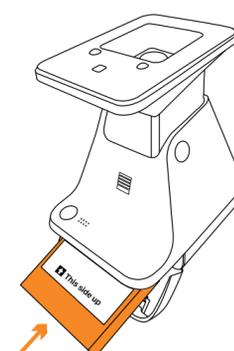

Phone to Polaroid™

01 Remove the cover from the platform. **Turn the Polaroid Lab on by pressing the platform release button on the right side of the Lab.** The phone platform will automatically lift into ready position. Check that the rainbow LED is lit up.
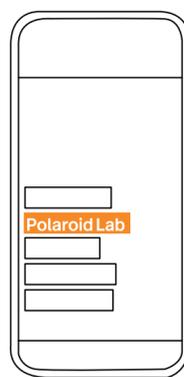

02 **Gently pull down on the film door to open it.**

03 Insert the film pack with the darkside cover facing up. **Use only Polaroid i-Type or Polaroid 600 type film.**
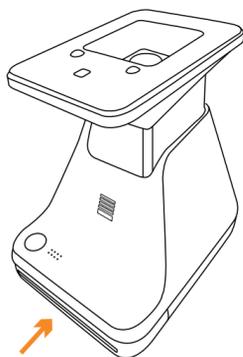

04 **Close the film door.** The darkslide will eject automatically beneath the film shield. Lift the film shield and allow it to roll back up, then remove the darkslide.

05 Open the Polaroid app and tap on the 'Polaroid Lab' option. **Follow the instructions on the app to select the picture that you would like to use.**

06 Place your phone on the Polaroid Lab platform with the screen facing down. **Ensure that your phone is aligned lengthways and the top of your phone is facing the top of the platform.** Remove any screen protector or phone cover, as this can impair final results.
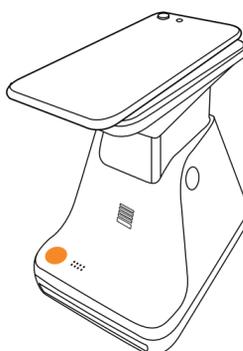

07 The Polaroid Lab will detect your phone on the platform. The rainbow LED will slowly blink three times and then stay on. If the rainbow LED blinks rapidly, realign your phone. **Once the blinking stops, press the red shutter button on the front of the Polaroid Lab.**

08 **Your photo will eject beneath the film shield.** After five seconds, lift the film shield, allow it to retract into the Polaroid Lab and then gently remove your photo.
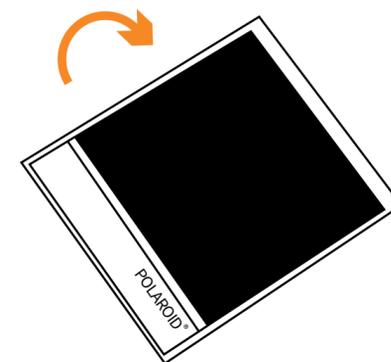

09 **Don't shake or bend the photo!** Shield it from light (in a pocket, or face down on a flat surface) until the image begins to emerge - black & white photos take 5-10 minutes, while color pictures take 10-15 minutes.

Polaroid Lab

A Light sensor
B Platform release / ON button
C Shutter button
D Rainbow LED
E Film counter LEDs
F Film door
G Touch points
H Film Shield
I Battery level LEDs
J Micro-USB slot

LED Film Counter

Blinking rapidly
No film inserted or
no shots remaining

Solid lights
Current film count (e.g. 4
LEDs = 4 shots remaining)

**Rainbow LED
Notifications**

No light
Polaroid Lab off

Slowly blinks 3 times
Reading phone

Rapid blink
Realign phone

Light on
Ready for exposure

**Check your Polaroid
Lab charge level**

The battery level is displayed
on four LEDs above the USB
slot at the back of the
Polaroid Lab. They will light up
corresponding with your charge
level (e.g. 2 LEDs = 50%)

While charging, the LEDs will flash.
When fully charged, and still
plugged into a power source,
the LEDs will be unlit
